Professional speech recognition.
Into any app.

Now on Mac.

Coming soon:
full workflow
for Mac.

LEXACOM
ECHO

Professional speech recognition, **with unrivalled accuracy.**

With its easy-to-use interface and industry-leading accuracy, Lexacom Echo speeds up data entry into all Mac apps. Lexacom Echo understands language in context, listening to sentences in full, capturing contexts, and transcribing the correct meanings.

Lexacom Echo can proofread your transcriptions, and its AI features can summarise meetings and generate documentation. You can create prompt phrases to insert standard sections of text and save time on repetitive typing. Use our built in voice commands, and create your own to match your work.

Lexacom Echo works with all types of documents, from wherever you are working. Setup is quick and easy, with no need to train your voice or customise settings: just speak and go. Regular updates to both the vocabulary and the software itself mean you'll always stay ahead.

- Simple and intuitive
- Create documents at up to 160 words per minute
- Place the cursor in any text field and start dictating
- Clean, clear, adjustable toolbar
- Easy to use interface
- Save up to 80% of admin time
- No voice profile training required
